

SkyDRM for Siemens NX

Protect Data at Rest, Shared File, and Payload

OVERVIEW

Siemens NX is an advanced high-end CAD/CAM/CAE application that is both flexible and powerful, helping organizations deliver better products faster using next-generation design and manufacturing solutions. Customers use Siemens NX for product design, engineering analysis, manufacturing, digital twinning, and collaboration across different industries to reduce time-to-market, cut production costs, and improve product quality. Customers often need to share the designs from NX with external partners to bring products to market faster, improve innovation and increase cost-effectiveness.

Even though sharing design documents with external partners provides these business advantages, it can also introduce potential security risks, including the following:

- **Data Breaches:** If an external partner’s security measures are inadequate, sensitive design information can be exposed to unauthorized parties.
- **Intellectual Property Theft:** Proprietary designs can be stolen or misused by partners or third parties.
- **Compliance Violations:** Sharing sensitive information without proper safeguards can lead to violations of data protection regulations, resulting in legal and financial penalties.
- **Supply Chain Attacks:** Cyber attackers can target external partners to gain access to design documents, exploiting vulnerabilities in their systems.

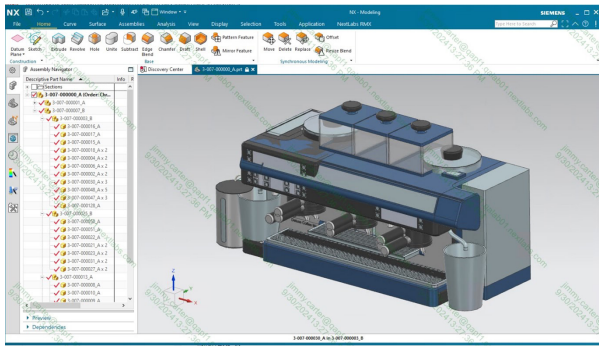

THE SOLUTION

To mitigate these risks, it is crucial to implement strong measures such as:

- **Data Encryption:** To protect data both in transit when it is shared and at rest.
- **Access and Usage Controls:** Implement the principle of least privileged access, limiting access to sensitive documents to only users who need them.
- **Regular Audits:** Conduct regular security audits of partners to ensure compliance with security standards.

SOLUTION COMPONENTS

NextLabs' SkyDRM is Enterprise Digital Rights Management (E-DRM) designed to protect data in use, in transit, at rest and when shared across extended enterprises with audit capabilities. With SkyDRM, any file type can be protected and accessed from any device to ensure secure collaboration with access and usage controls. SkyDRM integrates seamlessly with Siemens NX through a Rights Management Extension (RMX) to allow authorized users to open, view, import, export, and even modify the protected files natively within NX software, providing persistent data protection for secure collaboration with internal users and external partners.

KEY FEATURES

KEY FEATURES	
Classifying and Rights Protection	Classify and protect file as well as view classifications and permissions on the protected file directly within NX
Access Control	Allow authorized users to open the protected file within NX
Usage Control	Enforce permissions granted on the protected file to control the commands (edit / save as / import / export / print / screen capture) a user can execute within NX
Persistent Protection	Protect a new file automatically if it is generated (save / save as / export) from a protected file within NX, transferring the source file's metadata to the target file
Dynamic Watermark	Show a secure overlay containing dynamic watermark text preconfigured in the policy when opening a protected file in NX
Anti-Screen Capture	Design screens cannot be captured by screenshot tools or shared by video communication software without proper rights
Centralized Visibility	Centralized monitoring and reporting on data use for full visibility
Support JT Dispatch	Enable JT Dispatch to work with files protected by SkyDRM
Support Teamcenter Client Communication System	Enable Teamcenter Client Communication System (TCCS) to work with files protected by SkyDRM

ABOUT NEXTLABS

NextLabs®, Inc. provides zero trust data-centric security software to protect business critical data and applications. Our patented dynamic authorization technology and industry leading attribute-based zero trust policy platform helps enterprises identify and protect sensitive data, monitor and control access to the data, and prevent regulatory violations – whether in the cloud or on premises. The software automates enforcement of security controls and compliance policies to enable secure information sharing across the extended enterprise. NextLabs has some of the largest global enterprises as customers and has strategic relationships with industry leaders such as SAP, Siemens, Microsoft, AWS, Accenture, Deloitte, Infosys, and IBM. For more information on NextLabs, please visit <http://www.nextlabs.com>.

KEY COMPONENTS

KEY COMPONENTS	
SkyDRM Rights Management Server (RMS)	SkyDRM Rights Management Server provides end-to-end protection of sensitive data with authorization, rights protection, rights enforcement, and document activity monitoring
SkyDRM Rights Management Desktop (RMD)	Document owners and collaborators can use SkyDRM Desktop for Windows to protect sensitive documents at creation, view and edit protected documents using native applications, share data securely, even offline, and provide the sanctuary folder functionality
SkyDRM RMX for Siemens NX	SkyDRM RMX for Siemens NX allows authorized users to open, view, import, export, and modify the protected files using NX software natively

BENEFITS

BENEFITS	
Secure Information Sharing	Enable product data to be securely shared between design partners, suppliers, foreign employees, joint ventures, and customers worldwide by providing policy-driven protection and an end-to-end audit trail
Improved Compliance	Improve compliance and governance programs by automating information controls for sensitive product data with a comprehensive audit trail
Complete Data Protection	Protect sensitive product data by controlling access and usage as data moves across PLM, CAD, and Visualization systems. Protect data regardless of where it is – in a public Cloud, in SaaS applications, or on the move
Rapid Deployment and Adoption	Deep integration and zero-code client installation allows for rapid deployment among the extended partner networks
